Subject: RE: Potential Site Candidate for EPA Time Critical Response

Thanks, Betsy. The company is no longer operating on the property, so our previous contact information no longer works. We have an old cell phone number for the principal of the company, Dorie Reid, of 616-299-8904. I've called the number and left messages, but haven't received a call back. Mike Baranoski (269-567-3524, baranoskim@michigan.gov) is our project manager for this.

At this point we'd like to refer it to EPA. Give Mike a call to see to see if the two of you can schedule a site visit, and in the interim we'll see if we can glean any additional information on the company/principal.

Thanks again, and contact Mike or me if you have any questions.

Hi Frank,

We can absolutely take a look at it. Is it at the point where you would like to refer it to EPA, and have us do an assessment, or are you still looking into options? I'm in Ohio this week, but will be around some of next week and the following week if you would like to schedule a site visit.

Do you happen to have a phone number for the current owner or their attorney?

My cell is 734-770-8402.

Thanks Frank, as much as I'd love to do another site right now, I won't get any assigned to me until EPA is done at the Enbridge site in Marshall and Kalamazoo, hopefully this fall. I am forwarding this to my supervisor so she can assign it and cc'in a couple coworkers who I know don't have as many sites as others in our office. Thanks and feel free to call me or Mindy with questions.

Thanks for the referral.

Subject: Potential Site Candidate for EPA Time Critical Response

Good morning, Jeff, hope you're doing well.

We have a site that was a former secondary aluminum processor called Alreco Metals, Site ID 11000336 (aka Tobian Metals, aka Ace Companies, aka Harbor Light Metals), 900 Alreco Drive, Benton Harbor, Berrien County. Tax records indicate the current property owner is the Reid Group, LLC, P.O. Box 8711, Grand Rapids, MI 49518. Our understanding is the company has either gone through or is going through bankruptcy, and recently someone has been salvaging/demolishing the building. A recent site visit by one of our Air Quality Division staff documented the current state of the building and confirmed large piles of gray aluminum dross now exposed to the elements and the environment (attached). The site is immediately adjacent to wetlands and approximately 200 feet from the Paw Paw River (Google link below). Given the potential nature of dross (Alcoa link below), we're understandably concerned.

We're still gathering information on the situation and haven't been in contact with a company representative, but I thought I'd contact you to see if this is something EPA might take a look at.

Thanks very much, and let me know if you've got questions or need additional information.

Frank

Hi Elizabeth, Frank Ballo just put me in contact with the property owner. He claims he will address the dross on site and I plan on meeting him on site tomorrow to discuss his intentions. I will get contact information from him when I meet him, and hopefully his intentions to clean up this mess will be acceptable. I will let you know what I find out.

Best regards and we appreciate you quick reply to this. We were not sure that we could find a contact for this site. I plan to use a potential EPA response and cost recovery as a lever to encourage a rapid response by the property owner.

Hi Matt, I spoke with Mr. Reid, the property owner this morning and plan to meet him on site tomorrow. He stated that the building had collapsed (hence the demolition you saw) and that he thinks he can have

the dross recycled, but he needs to make arrangements to haul this stuff and bring equipment to the site.

He plans to cover the dross with tarps to prevent it from becoming airborne and to prevent rainwater from soaking it. Do you see any problems with this in the short term? Thanks much, Mike

Subject: RE: Berrien County Site Demolition and Recycling (Ace Companies formerly known Tobian Metals, Alreco Metals)

I am looking through the file and records in NMS to try to figure out if the site has storm sewers. The common theme among all of the inspection reports is that "the facility site map needs to include more detail regarding the storm water flow throughout the site and the outfalls which will receive storm water from various areas of the site."

There was definitely a discharge from the site to waters of the state. In 2007, the certified operator responded (to Steve Lewis' letter) that he was amending the facility site map, with a date of completion of May 18, 2007. It looks like this revised map was never submitted to DEQ. When the site was inspected again by Bob Spagnoli in 2010, the certified operator had left, and all of the files were gone.

There is a map in DEQ's file, which does not include catch basins or storm water flows. There are some hand markings, which appear to be Bob's. I'm giving the file to Bob, and hopefully he can shed some light on this. There were exposure issues at the time of Bob's inspection, and a letter and report were sent. The company never responded. I will forward those documents in a separate e-mail, directly from NMS.

The industrial storm water permit expired on April 1, 2013. I called the company last year to follow up, and the call did not go through. Since it appeared the facility had ceased operations and would therefore no longer need an ISW permit, DEQ had not followed up further.

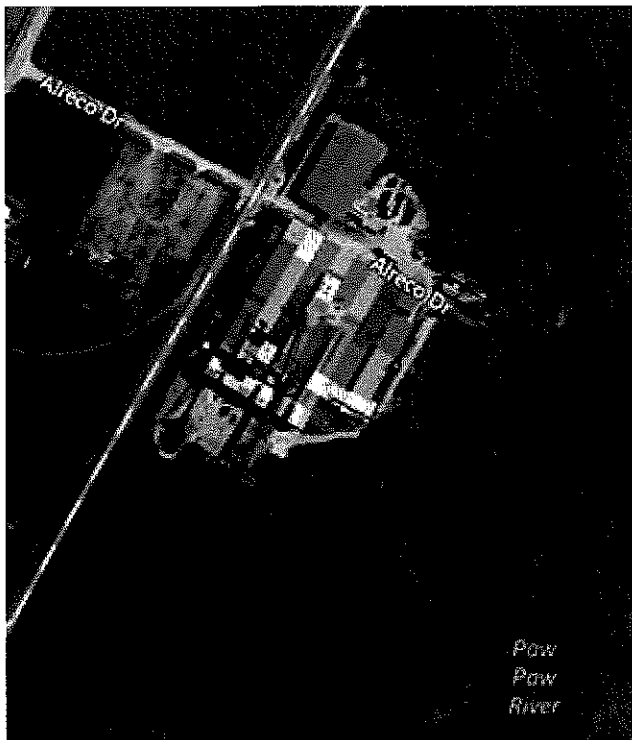

From the photos, this looks like an urgent situation. DEQ should have followed up further back in 2010, although at that point the worst issues were inside the buildings (which were already in disrepair), not the outside exposures to storm waters. I remember Bob showing me the photos and discussing this with me, but I can't remember what happened afterwards (e.g. if we informed someone in Waste or RRD).

Photos from inspections are in NMS, designated name is Ace Co LLC.

Subject: Berrien County Site Demolition and Recycling (Ace Companies formerly known Tobian Metals, Alreco Metals)

Hi Everyone,

I was out in the field yesterday and went by an old facility of mine (Ace Companies d.b.a. Harbor Light Metals) that I use to inspect but has been closed since June of 2010. I noticed that someone has been doing building demolition and scrapping activities. The facility/location has always processed Secondary Aluminum and is located at 900 Alreco Road, Benton Harbor, Berrien County and at one time was Tobian Metals, Alreco Metals, etc. I don't know the current ownership situation because they've been going through bankruptcy proceedings for a number of years but it was last owned by a man named Dorie Reid. No one was at the site during my visit but the neighbor across the road (Padnos Iron and Metal Recycling) said that Randy's Recycling had been recycling some material and that RJ Torching has been in there most recent. My main concern, besides potential asbestos notification issues, is all the leftover aluminum dross waste that is currently in concrete bins. By demolishing the building around them, the dross is now exposed to the elements which is why I wanted to make you guys aware of it. Frank and Mike, you may recall that Ace Companies received various brownfield monies/ grants to clean up the previous owners aluminum dross waste prior to them starting the plant up again. I think that was around 2005 and Prism was their consultant. I've attached some photos and please let me know if you have any questions. Thanks all.

Hi Betsy,

I inspected the site and met with the property owner, Mr. Reid, this afternoon. Mr. Reid proposes to place tarps over the ash piles (more ash than dross) after he special orders the large tarps he will need (hopefully, 6-8 weeks?). He plans to remove the ash by the end of summer. There are a variety of other issues associated with this property. I have attached a link to some pictures taken at the site recently.

I am going to discuss this issue with the division supervisors as there are questions as to whether Mr. Reid has the resources to take care of the problems and respond to this problem in a timely manner.

I expect that

Hi Betsy, attached is a copy of the reply letter we received from Mr. Dorie Reid, the facility owner, along with some of the pictures I took on a site inspection we did at the beginning of the month. Mr. Reid proposes to attempt to attain financing to conduct the cleanup of the ash piles (about a 200 X 80 feet area about 8 feet high), many bags of bag house waste stored in a crumbling structure, and various drums, waste piles and miscellaneous debris scattered across the property. The site is adjacent to the floodplain of the Paw Paw River.

Mr. Reid proposes to secure the ash from becoming windborne with tarps (yet to be ordered) and to secure two of the many drains on the site. Because it is unclear that Mr. Reid will actually be able to obtain financing to conduct cleanup by September and if he is unable to do so, this waste will remain in place until at least next year, I think that a more timely response is probably warranted to address the waste stored here before it is either blown or washed onto the floodplain.

I would like to invite you to conduct a site inspection and would be happy to meet you on site at your earliest convenience. Contact information for the property owner is included below. I appreciate your assistance in this matter. Best regards, Mike

Hi Mike,

When would be a good time for you to schedule a site visit? Next week Monday and Tuesday are open for me. The following week M-W are best for me.

I need to try and get a federal access agreement signed by the landowner – so I'll look into that too. If you do uncover any landowner contact info if you wouldn't mind forwarding that I'd appreciate it.

Thanks!

Betsy

Thanks, Betsy. The company is no longer operating on the property, so our previous contact information no longer works. We have an old cell phone number for the principal of the company, Dorie Reid, of 616-299-8904. I've called the number and left messages, but haven't received a call back. Mike Baranoski (269-567-3524, baranoskim@michigan.gov) is our project manager for this.

At this point we'd like to refer it to EPA. Give Mike a call to see to see if the two of you can schedule a site visit, and in the interim we'll see if we can glean any additional information on the company/principal.

Thanks again, and contact Mike or me if you have any questions.

Hi Frank,

We can absolutely take a look at it. Is it at the point where you would like to refer it to EPA, and have us do an assessment, or are you still looking into options? I'm in Ohio this week, but will be around some of next week and the following week if you would like to schedule a site visit.

Do you happen to have a phone number for the current owner or their attorney?

My cell is 734-770-8402.

Good morning, Jeff, hope you're doing well.

We have a site that was a former secondary aluminum processor called Alreco Metals, Site ID 11000336 (aka Tobian Metals, aka Ace Companies, aka Harbor Light Metals), 900 Alreco Drive, Benton Harbor, Berrien County. Tax records indicate the current property owner is the Reid Group, LLC, P.O. Box 8711, Grand Rapids, MI 49518. Our understanding is the company has either gone through or is going through bankruptcy, and recently someone has been salvaging/demolishing the building. A recent site visit by one of our Air Quality Division staff documented the current

state of the building and confirmed large piles of gray aluminum dross now exposed to the elements and the environment (attached). The site is immediately adjacent to wetlands and approximately 200 feet from the Paw Paw River (Google link below). Given the potential nature of dross (Alcoa link below), we're understandably concerned.

We're still gathering information on the situation and haven't been in contact with a company representative, but I thought I'd contact you to see if this is something EPA might take a look at.

Thanks very much, and let me know if you've got questions or need additional information.

Frank

Subject: RE: Alreco Metals, Request for Assistance

Here is a little site history for you from the MDEQ database:

This site was an aluminum smelting facility from 1965 to 1981. Secondary (recycled) aluminum smelting was conducted on the property from 1981-2001. In 1981, the Berrien County Circuit Court issued a consent order for site cleanup.

This plant was purchased by Reynolds Metals Company from Michigan Standard Alloys in 1981. It was refurbished for the reclamation of aluminum for the die cast industry in 1982 under the name ALRECO, a division of Reynolds Aluminum.

In 1983 Alreco conducted the removal of large amounts of aluminum dross disposed of along the Paw Paw River and restored the banks as part of the court-ordered response. Response activities were completed by 1988.

Tobian Metals acquired the property in 1997 and operated the smelter until 2001.

Several above ground petroleum storage tanks (250,000 gallon fuel oil, 2-500 gallon diesel, 1-500 gallon gasoline) were reported as abandoned containers in 1999 as part of a BEA and the prospective owner was to abandon these tanks. A release of petroleum to site soils was reported. The tanks were not abandoned.

An APC (approved partial closure) was approved for the site in 2001 in response to Part 201 issues at the site.

The Berrien County Brownfield Authority conducted a cleanup and due care response in 2005 that included the removal of dross, bag house dust, and an oil-water separator and drains, abandoned containers, and contaminated soils. It also repaired/replaced concrete and asphalt in the manufacturing building in preparation for redevelopment by Ace Companies, LLC.

Ace Companies, LLC (Harbor Light Metals) acquired the property and submitted a Notice of (contaminant) Migration as part of a BEA for the property in 2005. Permitting requirements of the AQD and WQD were not met by the owner between this time and 2010.

Subject: RE: Alreco Metals, Request for Assistance

Hi Betsy, this material was mostly ash. There were "bales" of bag house dust stored in one building and exposed bags of white powder outside of another building. The property owner reported that most of the dross he generated was salvaged by scrappers. There is quite a bit of brick, concrete and iron mixed in the ash. Apparently, the furnaces were removed for scrap value to settle the bankruptcy.

Reynolds Aluminum (operating under the Alreco name) acquired the site in 1981 from Michigan Standard Alloys and Reynolds did a cleanup of the site in the 1980's that included dross and other material. A new owner/operator, Tobian Metals, re-contaminated the site after 1997

with dross before they declared bankruptcy in 2001. This was cleaned up using state brownfield funding for the present owner.

So the site has been cleaned up previously by Reynolds and the state brownfield authority. Strike three is before us.

Hi Mike – Want to say 130 at the site this Thursday? I'll confirm with the landowner. Do you have a sense of how much dross is on site vs ash, or have any more info about their historical operations? Is the stuff from ALCOA (initial email below) what we are pretty sure is onsite? I just want to try and do our best to set ourselves up to sample it safely.

Hi Betsy, I am available Thursday after 1300 Hrs. and would be happy to meet you on site. We did not collect samples at the time I was out there as the material reportedly stored there was dross instead of ash. And like this inspection, we did it on rather short notice.

If Thursday afternoon does not work for you, I will be available any day next week. Best regards, Mike

Hi Mike – I just called Mr. Reid to request that he sign an EPA access agreement, and he said he would prefer to meet us on site. Would this Thursday work for DEQ for a site walk with him? I probably will need to come back again then afterwards to collect samples – I don't think I'll be able get that all arranged by Thursday – I can try though. Did DEQ ever collect any samples of the piles or any of the other waste/materials of concern? If you did, if you could forward the results of those too, I'd appreciate it.

Thanks,

Betsy

Subject: RE: Alreco Metals, Request for Assistance

Hi Betsy, attached is a copy of the reply letter we received from Mr. Dorie Reid, the facility owner, along with some of the pictures I took on a site inspection we did at the beginning of the month. Mr. Reid proposes to attempt to attain financing to conduct the cleanup of the ash piles (about a 200 X 80 feet area about 8 feet high), many bags of bag house waste stored in a crumbling structure, and various drums, waste piles and miscellaneous debris scattered across the property. The site is adjacent to the floodplain of the Paw Paw River.

Mr. Reid proposes to secure the ash from becoming windborne with tarps (yet to be ordered) and to secure two of the many drains on the site. Because it is unclear that Mr. Reid will actually be able to obtain financing to conduct cleanup by September and if he is unable to do so, this waste will remain in place until at least next year, I think that a more timely response is probably warranted to address the waste stored here before it is either blown or washed onto the floodplain.

I would like to invite you to conduct a site inspection and would be happy to meet you on site at your earliest convenience. Contact information for the property owner is included below. I appreciate your assistance in this matter. Best regards, Mike

Hi Mike,

When would be a good time for you to schedule a site visit? Next week Monday and Tuesday are open for me. The following week M-W are best for me.

I need to try and get a federal access agreement signed by the landowner – so I'll look into that too. If you do uncover any landowner contact info if you wouldn't mind forwarding that I'd appreciate it.

Thanks!

Betsy

Thanks, Betsy. The company is no longer operating on the property, so our previous contact information no longer works. We have an old cell phone number for the principal of the company, Dorie Reid, of 616-299-8904. I've called the number and left messages, but haven't received a call back. Mike Baranoski (269-567-3524, baranoskim@michigan.gov) is our project manager for this.

At this point we'd like to refer it to EPA. Give Mike a call to see to see if the two of you can schedule a site visit, and in the interim we'll see if we can glean any additional information on the company/principal.

Thanks again, and contact Mike or me if you have any questions.

Hi Frank,

We can absolutely take a look at it. Is it at the point where you would like to refer it to EPA, and have us do an assessment, or are you still looking into options? I'm in Ohio this week, but will be around some of next week and the following week if you would like to schedule a site visit.

Do you happen to have a phone number for the current owner or their attorney?

My cell is 734-770-8402.

Thanks Frank, as much as I'd love to do another site right now, I won't get any assigned to me until EPA is done at the Enbridge site in Marshall and Kalamazoo, hopefully this fall. I am forwarding this to my supervisor so she can assign it and cc'in a couple coworkers who I know don't have as many sites as others in our office. Thanks and feel free to call me or Mindy with questions.

Thanks for the referral.

STATE OF MICHIGAN
DEPARTMENT OF NATURAL RESOURCES & ENVIRONMENT
KALAMAZOO DISTRICT OFFICE

JENNIFER M. GRANHOLM
GOVERNOR

REBECCA A. HUMPHRIES
DIRECTOR

April 22, 2010

Mr. Wayne Perry
Harbor Light Metals, LLC, part of Ace Company, LLC
900 Alreco Road
Benton Harbor, Michigan 49023

Dear Mr. Perry:

SUBJECT: Storm Water Industrial/Commercial Inspection
Certificate of Coverage No. MIS310576
Designated Name: Ace Co LLC – Berrien County

On April 12, 2010, staff of the Department of Natural Resources and Environment (DNRE), Water Bureau (WB) conducted a Storm Water Industrial/Commercial Inspection at the Ace Company, LLC, located in Berrien County at 900 Alreco Road, Benton Harbor, Michigan. The purpose of the inspection was to evaluate the facility's compliance with Part 31, Water Resources Protection, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) and National Pollutant Discharge Elimination System (NPDES) Certificate of Coverage No. MIS310576 issued on June 10, 2008, effective June 10, 2008.

Mr. Dave Norris, representing Harbor Light Metals, and Mr. Robert Spagnoli, representing the DNRE, participated in the inspection, which included an interview, records review, and site inspection. Ace Company, LLC, owner of Harbor Light Metals, LLC, recovers and refines aluminum (and other metals), producing aluminum alloy products meeting specific customer specifications.

The following items were identified and discussed during our inspection. A copy of the Post Inspection Report, containing additional information, is enclosed.

1. Harbor Light Metals was unable to produce the most recent version of your Storm Water Pollution Prevention Plan (SWPPP) and associated documents such as inspections and annual reviews. It will be necessary to write a new SWPPP if the existing plan cannot be located. An excellent starting template is available at "Michigan.gov." Search for "SWPPP" and download the DOC (Microsoft Word) version. I would be happy to assist you with any drafts, reviews, or revisions.
2. The site map portion of the SWPPP must be reproduced. Staff will concurrently, with this letter, e-mail you the links to the General Permit covering your particular COC. Please download it and keep it with your new SWPPP. Paragraph I.C.1.a covers the important basic needs of the map.
3. Harbor Light Metals has uncovered dumpsters containing process byproducts and other wastes. These dumpsters must be covered with a tarp, under a roof, moved indoors, or replaced by dumpsters with lids.

Mr. Wayne Perry
Page 2
April 22, 2010

4. During the visit, two spills were in evidence. One had occurred earlier, near the scale, where spilled oil was being soaked up with a white powder (lime?) because of having run out of oil absorbent. The other spill was fuel from a piece of equipment with a broken fuel line that had not been cleaned up or contained. It is necessary to keep sufficient spill management materials available at locations where it is handy. Typically, good locations are inside, but near doorways or liquid storage areas.
5. Harbor Light Metals does not currently have a certified storm water operator. You have signed up to take the training and exam here in Kalamazoo on May 12, 2010. If you pass the exam, no further action on the part of Ace Company is required.

Thank you for your cooperation in these matters. Please respond to Items 1 through 4 by **May 28, 2010**. If you have any questions or comments regarding this letter, or would like to meet to discuss it, please contact me at the number listed below. I would be pleased to assist you in getting started and reviewing documents at any stage of the revisions. Thank you for doing your part in helping to keep Michigan's waters clean.

Sincerely,

Robert A. Spagnoli

Inspection Summary/Notes

Storm Water Pollution Prevention Plan (SWPPP) records are missing. Numerous exposures to storm water. Open dumpsters are on site. Ace Company, LLC is the umbrella company; Harbor Light is this site in Berrien County

AREAS EVALUATED

Comment

PERMIT REVIEW

Satisfactory

Permit is current. Site qualifies for permit with appropriate discharge and exposure parameters. GPS location is correct.

SWPPP

Un-Satisfactory

Documents could not be found. Former contact has left company and office records were cleaned out. Documents may yet turn up. The site map secured during inspection lacks important details such as catch basin locations and connections.

STRUCTURAL CONTROLS

Marginal

Building is in disrepair. Significant areas of roof are very porous. It appears that water entering inside winds up in various equipment wells. (The equipment has been removed.)

**DNRE-WATER BUREAU
POST INSPECTION REPORT**

NON-STRUCTURAL CONTROLS

Marginal

Records are lacking. Maintenance appears satisfactory.

CERTIFIED OPERATOR

Satisfactory

Wayne Perry of Harbor Light Metals (wperry@harborlightmetals.com), 269-519-3235, has signed up for the May 12, 2010, exam in Kalamazoo.

CONTAINMENT AREA

Not Applicable

EXPOSURE

Un-Satisfactory

The site has numerous piles of scrap outdoors. Dumpsters are uncovered.

COMPLAINT INVESTIGATION
